Submitted to the EMBL Data Library, November 1993
A; Description: Mycobacterium leprae cosmid B2235.
A; Reference number: $72587
A; Accession: $72938
A; Status: Preliminary
A; Residues: 1518
A; Mycolecule type: DNA
A; Residues: 1518

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A; Molecule type: DNA
A; Residues: 379-619 <GE2>
A; Comment: This enzyme, which catalyzes the oxidation of benzendiol to benzosemiquinone: C; Genetics:
A; Cromment: This enzyme, which catalyzes the oxidation of benzendiol to benzosemiquinone: C; Genetics:
A; Introns: 86/3
C; Superfamily: laccase
C; Keywords: copper: glycoprotein; oxidoreductase
C; Keywords: copper: glycoprotein; oxidoreductase
C; Keywords: copper: glycoprotein; oxidoreductase

C. Comment: This protein consists of a signal peptide, a propeptide, a substilisin-lik
C. Comment: This protein cleaves precursor proteins at dibasic amino acid residues.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          C;Accession: JC2191

Keratin, 59K type I cytoskeletal - mouse
N;Alternate names: 59-kDa type I keratin
C;Species: Mus musculus (house mouse)
C;Date: 15-Nov-1984 #sequence_revision 04-Dec-1986 #text_change 10-Dec-1999
C;Accession: A02940
R;Krieg, T.M.; Schafer, M.P.; Cheng, C.K.; Filpula, D.; Flaherty, P.; Steinert, P.M.;
J. Biol. Chem. 260, 5867-5870, 1985
A;Title: Organization of a type I keratin gene. Evidence for evolution of intermediat
A;Reference number: A02940; MUID:85207552
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               A; Note: initiator Met not shown
A; Note: the authors translated the codon GAG for residue 41 as Gly
C; Comment: Fourier analysis has identified a 7-residue repeating pattern (heptad) bet forms a stable alpha-helical coiled coil but is interrupted by three short regions wi C; Comment: Most of the introns of the gene encoding this protein are located within the sequence at or near the beginning of heptad repeats. Several of these sites are co C; Comment: The amino and carboxyl ends are rich in glycine, serine, and aromatic resi

```

- DOMAIN: THE PROPEPTIDE DOMAIN ACTS AS AN INTRAMOLECULAR CHAPERONE
  - ASSISTING THE FOLDING OF THE ZYMOGEN WITHIN THE ENDOPLASMIC RETICULUM. ISOFORM PACEAD LACKS THE PROPEPTIDE DOMAIN.
    SIMILARIY: BELONGS TO PEPTIDASE FAMILY S8; ALSO KNOWN AS THE SUBTILASE FAMILY.

SIMILARITY: CONTAINS 1 HOMO B/P DOMAIN.

-!- FUNCTION: TRANSCRIPTION FACTOR THAT BINDS PREFERENTIALLY TO THE RECOGNITION SEQUENCE WHICH CONSISTS OF TWO DISTINCT HALF-SITES, ('GCAT') AND ('TAAT'), SEPRRATED BY A NONCONSERVED SPACER REGION OF 0, 2, OR 3 NUCLEOTIDES. POSITIVELY REGULARES THE GENES UNDER THE CONTROL OF CORTICOTROPIN-RELEASING HORMONE (CRH) AND CRH II
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Hara Y., Rovescalli C., Kim Y., Nirenberg M.; Structure and evolution of four POU domain genes expressed in mouse
